

Software Requirements Specification

v1.0 — 2026-04-30

1. Introduction

This specification describes the read_document agent tool's v1 behaviour. It must extract tabular data with cell-perfect accuracy from PDFs that contain ruled tables.

2. Functional Requirements

The following table enumerates the requirements:

ReqId	Priority	Status
FR-001	MUST	Approved
FR-002	SHOULD	Approved
FR-003	MAY	Pending
FR-004	MUST	Approved

3. Non-functional Requirements

Performance and reliability bounds for v1:

Metric	Bound	Measured
Parse latency	30s p95	TBD
Memory	50MB scratch	TBD
Concurrency	2 docs	by Semaphore

4. Acceptance

The acceptance matrix is reproduced below. Note that table 3 is on page 2; the splice algorithm must produce a Markdown table that follows the heading 'Acceptance' rather than appearing at end-of-document.

Test	Expected	Actual
TC-1	Pass	Pass
TC-2	Pass	Pass
TC-3	Pass	Pending

End of specification. Total tables on this document: 3 (FR matrix, NFR bounds, Acceptance).
